Corporate way

New technologies are constantly present in the IT industry. There is also a fusion of different technologies such as AI and mechanical engineering as seen in robot technology. Globalization has also progressed, and the distribution industry, manufacturing industry and others are out of Japan. EC has already crossed the border.

Given this situation, it is a group of IT consultants group that contributes to creating a system looking for the next five or ten years. As a project, it contributes to the following three fields.
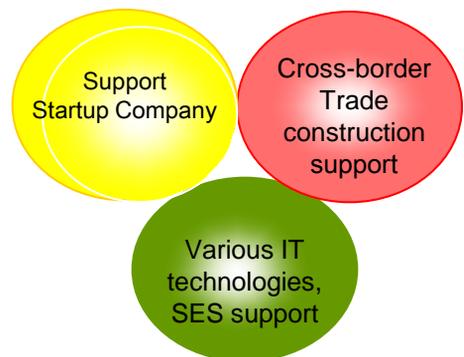

Field-1 Support startup company
Field-2 Cross-border Trade construction support
Field-3 Various IT technologies, SES support

It is a specialized company of business and technology consulting in the authoritative computer industry that gathers professional advisers and provides guidance and support at necessary times.

Business pillars

We will develop the following three businesses.

〇 Support startup company
We will carry out featuring to realize business design and follow up on listing etc, but we also do practice at our new company depending on the case.

〇 Cross-border Trade construction support
We will build and support for selling Japanese products overseas. Construction cost is standard from a minimum of ¥500,000 to ¥3 million

〇 Various IT technologies, SES support
We will support the trend of the latest technology, information gathering necessary for your company, allowance for human resources etc.
